**Installation**

**NOTE:** To add Tamper Proof Controls to a heater that has not yet been installed, omit steps 1 through 6.

1. Disconnect the electrical supply serving the heater.

2. Remove the retaining screw at trim frame bottom (A, Fig. 1), and pull off the aluminum trim frame to expose the grille mounting screws.

3. Pull off the thermostat knob.

4. Remove the grille mounting screws and the grille. (Fig. 2)

5. Remove the screws attaching the heater to the wall box. (Fig. 3)

6. Disconnect the service leads, all wall thermostats leads, if present, and remove the heater from the wall box.

7. Using a flathead screwdriver, depress the locking tabs in behind the switch to release and remove it from the bracket. Attach switch to provided switch bracket (Fig. 5a) by pushing switch through bracket until you hear the locking tabs snap into place.

8. Remove original switch bracket from the heater and exchange it for the switch and bracket put together in step 7 using the screws removed. (Fig. 4)

9. Remove the two screws attaching the thermostat to the mounting plate. (Fig. 4) Add the space bracket (Fig. 5b) between the thermostat bracket and the mounting plate. Use the two screws (provided) to affixe the thermostat to the heater.

10. Reconnect the service leads and mount the heater in the wall box using the screws removed in step 5.

11. Restore the electrical power and check the heater for proper operation. Set the thermostat for the desired temperature using the knob removed in step 3. Remove the knob after setting.

12. Install the new grille using the mounting screws removed in step 4.

13. Install the trim frame to the grille, securing its upper back edge behind the lip on the top. Push in at bottom until frame is flush with grille and secure with screw.
