IMPORTANT SAFETY INFORMATION: Always read this manual first before attempting to service this fireplace. For your safety, always comply with all warnings and safety instructions contained in this manual to prevent personal injury or property damage.
Always use a qualified technician or service agency to repair this fireplace.

**NOTE:** Procedures and techniques that are considered important enough to emphasize.

**CAUTION:** Procedures and techniques which, if not carefully followed, will result in damage to the equipment.

**WARNING:** Procedures and techniques which, if not carefully followed, will expose the user to the risk of fire, serious injury, or death.
WARNING: This electric firebox must be properly installed before it is used.
The unit can be controlled by either the manual controls which are located on the upper right of the fireplace or the remote (Figure 1 & 12).
The fireplace is supplied with an IR multifunction remote control.

 NOTE: To operate correctly, the remote control must be pointed towards the Floating Display™.

A. Standby
Turns the unit On and Off.
→ Activated by pressing the Standby button on the remote or the unit.
• The unit will turn on with the same functions that it was set to when it was turned Off and the intake temperature will be indicated on the On Screen Display.

 NOTE: When any button is pressed the intake temperature will be displayed on the On Screen Display for 5 seconds.

B. Flame Effects
Turns the flame effect On and Off.
→ Activated by pressing the button on the remote.

C. Heat ON/OFF
Cycles the unit sequentially through the 3 settings: Low Heat, High Heat and Off.
→ Activated by pressing the button on the unit or the remote.
• Indicated by the icon and the intake temperature being displayed on the On Screen Display, for 5 seconds before turning off.

 NOTE: After the heater is switched off, there is a 60 secondfan delay, where the fan will continue running before turning off.

 NOTE: The unit can be operated in Heat Only Mode.

When the unit is only running with the heater, the icon will continuously be displayed on the On Screen Display.

 NOTE: The heater may emit a slight, harmless odor when first used. This odor is a normal condition caused by initial heating of internal heater parts and will not occur again.

D & E. Thermostat Controls
Adjusts the temperature set point to your individual requirements. Once the desired set temperature is reached the heater will turn off. The heater will cycle on and off to maintain the desired set temperature. The default temperature setting is 72°F (22°C).
→ Adjusted by pressing the to decrease the set point and the to increase the set point on the unit or the remote.
• The On Screen Display will indicate the temperature set point as it is adjusted.

 NOTE: Holding the and the buttons down for two seconds, on the unit, will change the temperature from °C to °F, or vice versa.

Disable Heat
If desired, depending on the season, the heater on the unit can be disabled. The unit will operate in the same fashion, with remainder of the controls.
Pressing the buttons on the unit at the same time and holding for 2 seconds will disable and enable the heater.

 NOTE: When the heater has been disabled and either the or the is pressed the On Screen Display will indicate "-".

F. Color Themes
Different presets of ambient lighting color combinations contained in the unit.
→ Changed by repeatedly pressing the corresponding button on the remote or the unit.
• Cycles through the different preset ambient lighting settings of the unit, this includes different combinations of colours of the flame base and media lighting.

 NOTE: The last theme of the cycle is a prism where the unit cycles through a variety of colours. Pressing the button stops the cycling and holds the unit on the preferred color, indicated by a "U" - Unfreeze or a "F" - Freeze on the display.

G. Brightness
Changes the brightness of the lights in the unit.
→ Adjusted by repeatedly pressing the corresponding but-
ton on the remote.

- Indicated by the second digit on the Floating Display™ changing to show: “H” (high), and “L” (low).

**H. Sleep Timer**
The Sleep Timer can be set to automatically shut off the fireplace after a preset time (from 30 minutes to 8 hours).

→ To set the timer press the timer button on either the remote or the unit, repeatedly, until the desired time is displayed.

- The On Screen Display will display the different times as it is adjusted. Once the timer has begun, pressing the button will display the time remaining before the unit turns Off.

**NOTE:** The Sleep Timer can be cancelled at any time by pressing the button repeatedly until the sleep timer displays nothing.

**Resetting the Temperature Cutoff Switch**
Should the heater overheat, an automatic cut out will turn the heater off and it will not come back on without being reset. It can be reset by unplugging the unit and waiting 5 minutes before plugging the unit back in.

**CAUTION:** If you need to continuously reset the heater, unplug the unit and call technical support at 1-888-346-7539.

**Remote Control Battery Replacement**
To replace the battery:
1. Slide battery cover open on the remote control.
2. Correctly install one 3 Volt (CR2032 [longer life] or CR2025) battery in the battery holder.
3. Close the battery cover.

Battery must be recycled or disposed of properly.

Check with your Local Authority or Retailer for recycling advice in your area. Battery must be recycled or disposed of properly. Check with your Local Authority or Retailer for recycling advice in your area.

### MAINTENANCE

**WARNING:** Disconnect power and allow heater to cool before attempting any maintenance or cleaning to reduce the risk of fire, electric shock or damage to persons.

**NOTE:** The fireplace should not be operated with an accumulation of dust or dirt on or in the unit, as this can cause a build up of heat and eventual damage. For this reason the heater must be inspected regularly, depending upon conditions and at least at yearly intervals.

**Partially Reflective Glass Cleaning**
The partially reflective glass is cleaned in the factory during the assembly operation. During shipment, installation, handling, etc., the partially reflective glass may collect dust particles; these can be removed by dusting lightly with a clean dry cloth.

To remove fingerprints or other marks, the partially reflective glass can be cleaned with a damp cloth. The partially reflective glass should be completely dried with a lint free cloth to prevent water spots. To prevent scratching, do not use abrasive cleaners.

**Fireplace Surface Cleaning**
Use only a damp cloth to clean painted surfaces of the fireplace. Do not use abrasive cleaners.

**Servicing**
Except for installation and cleaning described in this manual, an authorized service representative should perform any other servicing.
Replacement Parts List

1. Element ........................................ 2200510500RP
2. Partially Reflective Glass .............. 5901920100RP
3. Blower ........................................ 5300260100RP

PREPARATION FOR SERVICE

! NOTE: All components are replaceable from the front of the fireplace while the unit is mounted on the wall, with the exception of replacement of the power cord.

! NOTE: If the power cord needs replacing or if the unit needs to be removed from the wall for any other reason please begin service by following the “PREPARATION FOR SERVICE” instructions, then move on to the section “INSTRUCTIONS FOR REMOVING FROM WALL”.

Tools Required: Philips head screwdriver

⚠️ WARNING: Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

⚠️ CAUTION: If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

1. Disconnect power source.
   • Unplug the fireplace from the outlet.
   • If unit has been hardwired for power or outlet is not accessible from the front, turn the breaker off at the electrical panel.

2. Remove the front glass assembly by removing the 2 screws (1 on the left and 1 on the right side, located just inside the top front vent opening). These screws secure the front glass panel to the inside of the fireplace. (Figure 4)

3. Lift the front glass assembly off of the 4 mounts located between the outer and inner casing of the fireplace: 2 on the left and 2 on the right. (Figure 3) Carefully place the glass assembly aside in a safe location.

4. Remove the decorative glass ember-bed pieces from the media tray, which lies along the bottom of the interior Partially Reflective Glass. A medium sized container such as a bucket or a box will be needed to keep the glass ember-bed pieces together.

5. Remove the Partially Reflective Glass by removing the 2 screws on each bracket; (2-brackets in total), located on the left and right side of the Partially Reflective Glass.

6. With one hand gently supporting the Partially Reflective Glass, carefully pry the Partially Reflective Glass forward from the upper half so that it begins to tilt forward from the top. Grasp the Partially Reflective Glass from the sides and carefully lift it up and out from the front of the fireplace. Set it aside in a safe place.

⚠️ CAUTION: Partially Reflective Glass is not tempered. Do not bump or drop the Partially Reflective Glass to avoid breakage and personal injury.

7. Proceed to the instructions within this manual relating to the repair being performed - see Table of Contents for page number.

INSTRUCTIONS FOR REMOVING FROM WALL

⚠️ WARNING: Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

⚠️ CAUTION: If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

! NOTE: Only required for replacement of the power cord or removal from service.

⚠️ CAUTION: Follow “Preparation for Service” instructions before proceeding.

Mounting - The fireplace may be mounted in one of 3 methods:
• Surface Mount
• Recess Mount (partially in the wall)
• Flush Mount (completely in the wall)

Identify the type of mounting and follow the appropriate instructions in the following pages. (See Figure 5 for the top and side profile view with measurements of the back panel).

⚠️ CAUTION: Two people will be required for removal and re-installation of the fireplace. The unit is approx. 50 5/16"w x 19 1/2"h x 7"d. Weight is approximately 75lbs.

! NOTE: If fireplace is hard wired directly to the electrical panel, and there is not enough slack in the wires within the wall to reach your work area, remove the electrical junction box cover located on the bottom right by removing the 1 screw on the front of the cover. Lift the cover off and set aside. Disconnect the 3 wire connectors connected to the power source, taking note of their original configuration.
Surface Mount
(Figure 6)

Tools Required: Philips head screwdriver

⚠️ CAUTION: Follow “Preparation for Service” instructions before proceeding.

1. Partially unscrew the rear mounting screws that are holding the fireplace to the wall along the back panel of the unit. Support the weight of the fireplace when loosening the screws so unit does not fall off the wall unexpectedly.

⚠️ NOTE: Be sure to take note of which keyhole mount openings were used for positioning the fireplace so that it can be re-placed in the same location when service is complete. (Figure 6)

2. Take the fireplace off the wall by carefully lifting the fireplace off the mounting screws so they line up to the larger part of the keyhole openings and pull forward. Carefully lay the unit down on a solid flat surface with the front of the unit facing up.

⚠️ NOTE: If the surface you are using as a work area on is a finished surface that is prone to scratches (i.e. hardwood flooring), it is recommended that a protective barrier be used underneath, (i.e. cloth, cardboard, thick plastic).

3. Proceed to the instructions within this manual relating to the repair being performed - see Table of Contents for page number.

4. Once repair is complete, reassemble in the reverse order as above.

Recessed Mount - Partial In-wall
(Figure 7)

Tools Required: Philips head screwdriver

⚠️ CAUTION: Follow “Preparation for Service” instructions before proceeding.

1. Remove the 4 mounting screws located approximately 3 inches deep in the space between the outer and
inner casing on the left and right hand side. There are 2 screws per side, upper and lower going into a stud. (Figure 8)

⚠️ CAUTION: The fireplace should be supported while removing the screws to prevent the unit from falling.

2. Remove the fireplace out of the opening by slightly lifting and pulling forward.
3. Carefully lay the unit down on a solid flat surface with the front of the unit facing up.

⚠️ NOTE: If the surface you are using as a work area is a finished surface that is prone to scratches (i.e. hardwood flooring), it is recommended that a protective barrier be used underneath, (i.e. cloth, cardboard, thick plastic).

4. Proceed to the instructions within this manual relating to the repair being performed - see Table of Contents for page number.
5. Once repair is complete, reassemble in the reverse order as above.

---

Flush Mount – Complete In-wall  
(Figure 9)

Tools Required: Philips head screwdriver

⚠️ CAUTION: Follow “Preparation for Service” instructions before proceeding.

1. Locate and remove the 4 mounting screws inside the unit located on left and right side towards the front. There are 2 screws per side, going from the side panels out into the side of the wall stud that frames the fireplace. (Figure 9)

⚠️ CAUTION: The unit should be supported while removing the screws to prevent the unit from falling.

2. Remove the fireplace out of the opening by slightly lifting and pulling forward.
3. Carefully lay the unit down on a solid flat surface with the front of the unit facing up.

⚠️ NOTE: If the surface you are using as a work area is a finished surface that is prone to scratches (i.e. hardwood flooring), it is recommended that a protective barrier be used underneath, (i.e. cloth, cardboard, thick plastic).

4. Proceed to the instructions within this manual relating to the repair being performed - see Table of Contents for page number.
5. Once repair is complete, reassemble in the reverse order as above.

---

LED LIGHT STRIPS REPLACEMENT

⚠️ WARNING: Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

⚠️ CAUTION: If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

Tools required: Phillips head screwdriver

⚠️ CAUTION: Follow “Preparation for Service” instructions before proceeding.

1. Remove the plastic media tray by removing the 6
screws: 3 on the left and 3 on the right of the tray. (Figure 10)

2. Partially release the lower face panel, by removing the screw on the left side and on the right side of the panel, inside the unit. Pull the front panel forward from the topside by approximately 2" inches. There are 3 additional screws located underneath the front face but do not need to be removed. There should be enough "give" to allow the panel to pull slightly forward.

3. The tray has a small lip that goes underneath and slightly up behind the Partially Reflective Glass - from the front edge, pull the tray up and forward to take it out of the fireplace.

4. Remove the 2 screws that secure the media tray support to the unit and lift the tray support out being cautious of the media LED light strip wiring.

5. Gently remove the flicker rod from the unit by holding the rubber grommet on the shaft of the motor and turning the flicker rod to the left, until the rod releases.

6. Remove the LED strips by pushing in the center of the stand-off to release the inner stand. The inner stand can then be removed from the unit and the LED strip can be pulled off of the remaining part.

7. Install the new board onto the unit and reinstall the inner stand into the standoffs to secure the LED strip to the unit.

8. Trace the connector from the board location to the electronics junction board, remove the old connection and replace with the new connector.

9. Ensure that all cords are replaced in the same manner as prior to the service.

10. Reassemble in the reverse order as above.

11. Reassemble in the reverse order as above.

LED MEDIA STRIPS REPLACEMENT

WARNING: Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

CAUTION: If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

Tools required: Phillips head screwdriver
Wire snips

CAUTION: Follow "Preparation for Service" instructions before proceeding.

1. Remove the plastic media tray by removing the 6 screws: 3 on the left and 3 on the right of the tray. (Figure 10)

2. Partially release the lower face panel, by removing the screw on the left side and on the right side of the panel, inside the unit. Pull the front panel forward from the topside by approximately 2" inches. There are 3 additional screws located underneath the front face but do not need to be removed. There should be enough "give" to allow the panel to pull slightly forward.

3. The tray has a small lip that goes underneath and slightly up behind the Partially Reflective Glass - from the front edge, pull the tray up and forward to take it out of the fireplace.

4. Locate the LED media strip to be replaced.

5. Remove the LED strips by pushing in the center of the stand-off to release the inner stand. The inner stand can then be removed from the unit and the LED strip can be pulled off of the remaining part.

6. Install the new board onto the unit and reinstall the inner stand into the standoffs to secure the LED strip to the unit.

7. Trace the connector from the board location to the electronics junction board, remove the old connection and replace with the new connector.

8. Ensure that all cords are replaced in the same manner as prior to the service.

9. Reassemble in the reverse order as above.

ELECTRONICS JUNCTION BOARD REPLACEMENT

WARNING: Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

CAUTION: If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

Tools required: Phillips head screwdriver
Wire snips

CAUTION: Follow "Preparation for Service" instructions before proceeding.

1. Locate the Electronics Junction board. (Figure 12)

2. Remove the board by pinching the plastic mounting tabs with needle nose pliers. Pull the old board off.

3. Install the new board onto the unit.

4. Transfer the connections from the old board to the new board.
5. Ensure that all cords are replaced in the same manner as prior to the service.
6. Reassemble in the reverse order as above.

FLOATING DISPLAY ASSEMBLY REPLACEMENT

**WARNING:** Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

**CAUTION:** If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

**Tools required:** Phillips head screwdriver

**CAUTION:** Follow “Preparation for Service” instructions before proceeding.

1. Locate the floating display assembly. (Figure 12)
2. Remove the 2 screws securing the board to the mounting bracket.
3. Install the new board onto the unit.
4. Trace the connector from the assembly location to the electronics junction board, remove the old connection and replace with the new connector.
5. Ensure that all cords are replaced in the same manner as prior to the service.
6. Reassemble in the reverse order as above.

LED DRIVER BOARD REPLACEMENT

**WARNING:** Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

**CAUTION:** If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

**Tools required:** Phillips head screwdriver

**CAUTION:** Follow “Preparation for Service” instructions before proceeding.

1. In the upper right hand corner of the unit, above the floating display board, locate the control board cover panel and remove the 2 securing screws. (Figure 11)
2. Locate the LED driver board. (Figure 12)
3. Remove the board by pinching the plastic mounting tabs with needle nose pliers. Pull the old board off.
4. Install the new board onto the unit.
5. Transfer the connections from the old board to the new board.
6. Ensure that all cords are replaced in the same manner as prior to the service.
6. Reassemble in the reverse order as above.

MAIN CONTROL BOARD REPLACEMENT

**WARNING:** Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

**CAUTION:** If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

**Tools required:** Phillips head screwdriver

**CAUTION:** Follow “Preparation for Service” instructions before proceeding.

1. In the upper right hand corner of the unit, above the floating display board, locate the control board cover panel and remove the 2 securing screws. (Figure 11)
2. Locate the main control board. (Figure 12)
3. Remove the board by pinching the plastic mounting tabs with needle nose pliers. Pull the old board off.
4. Install the new board onto the unit.
5. Transfer the connections from the old board to the new board.
6. Ensure that all cords are replaced in the same manner as prior to the service.
6. Reassemble in the reverse order as above.

RELAY BOARD REPLACEMENT

**WARNING:** Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

**CAUTION:** If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

**Tools required:** Phillips head screwdriver

**CAUTION:** Follow “Preparation for Service” instructions before proceeding.

1. In the upper right hand corner of the unit, above the floating display board, locate the control board cover panel and remove the 2 securing screws. (Figure 11)
2. Locate the relay board. (Figure 12)
2. Remove the board by pinching the plastic mounting tabs with needle nose pliers. Pull the old board off.
3. Install the new board onto the unit.
4. Transfer the connections from the old board to the new board.
5. Ensure that all cords are replaced in the same manner as prior to the service.
6. Reassemble in the reverse order as above.

THERMISTOR REPLACEMENT

⚠️ WARNING: Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

⚠️ CAUTION: If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

Tools required: Phillips head screwdriver

CAUTION: Follow “Preparation for Service” instructions before proceeding.

1. In the upper right hand corner of the unit, above the floating display board, locate the control board cover panel and remove the 2 securing screws. (Figure 11)
2. Locate the thermistor on the outside of the control board housing, to the right. (Figure 12)
3. Remove the board by pinching the plastic mounting tabs with needle nose pliers. Pull the old board off.
4. Install the new board onto the unit.
5. Follow the cable back to the main control board and disconnect the old thermistor and connect the new cable.
6. Ensure that all cords are replaced in the same manner as prior to the service.
7. Reassemble in the reverse order as above.

SWITCHBOARD REPLACEMENT

⚠️ WARNING: Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

⚠️ CAUTION: If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

Tools required: Phillips head screwdriver, Small adjustable wrench

CAUTION: Follow “Preparation for Service” instructions before proceeding.

1. In the upper right hand corner of the unit, above the floating display board, locate the switchboard cover panel and remove the 5 securing screws - 3 along the bottom front edge and 2 on either end. (Figure 11)
2. Partially release the lower face panel, by removing the screw on the left side and on the right side of the panel, inside the unit. Pull the front panel forward from the topside by approximately 2 inches. There are 3 additional screws located underneath the front face but do not need to be removed. There should be enough “give” to allow the panel to pull slightly forward.
3. The tray has a small lip that goes underneath and slightly up behind the Partially Reflective Glass - from the front edge, pull the tray up and forward to take it out of the fireplace.
4. Remove the 2 screws that secure the media tray support to the unit and lift the tray support out being cautious of the media LED light strip wiring.
5. Carefully slide the electrical box to the right to release the securing tabs, as wires are fed through the strain reliefs on the cover and are connected within.
6. a) If the new and old flicker motors have 3 wires: disconnect the wiring connections from the terminal block noting their original locations and install the new motor similarly.
   b) If the old flicker motor has 3 wires and the new flicker motor has 2 wires: disconnect the wiring connections and the capacitor, install the 2 wires in the two holes where the capacitor was installed.
   c) If the old and new flicker motors both have two wires, cut the wires approximately 1 in (25.4 mm) from the hole that the wires pass to the top of the unit, strip off 1/2 in (12.7 mm) the end of each wire and insert...
the end of the wire from the flicker motor and the wire from the unit (ensure the colours correspond), into the provided connectors and with pliers squeeze to make the connection.

8. Remove the 2 screws holding the flicker motor to the mounting bracket. Gently pull the motor away from the flicker rod.

**CAUTION:** When removing and replacing the flicker motor try to keep any slight bending of the flicker rod minimal so as to not damage it. If flicker rod is damaged, it should be replaced to ensure proper operation.

9. Properly orient the new flicker motor onto the motor bracket and re-attach with the 2 mounting screws.

10. Reassemble in the reverse order as above.

**ELEMENT REPLACEMENT**

**WARNING:** Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

**CAUTION:** If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

**Tools required:** Phillips head screwdriver

- Short handled Phillips head screwdriver
- Needle nosed pliers
- Wire Snips
- 3/8” ratchet or wrench

**CAUTION:** Follow “Preparation for Service” instructions before proceeding.

1. Remove the 5 screws that secure the angled switch housing cover located just below the Remote Switchboard on the top right. Remove cover and set aside.

2. Loosen the front panel that spans across the top front facia. To do so, locate the 4 screws: 2 on the left and 2 right on the angled part behind the facia. This piece can be removed by turning it 90 degrees and allowing the glass mounting screw slide through the slot in the backside of the panel.

3. Remove the heating assembly cover in the top center by removing the 6 screws on the side brackets: 3 on the left and 3 on the right (at the front). Wires from the switch housing are connected through this piece, so carefully move it farther down in the body of the unit, to give some room to access the heating assembly housing.

4. Release the top panel of the heating assembly housing by removing 4 screws on the side brackets. Pull the top panel of the heating assembly housing out from between the brackets.

5. From the top panel of the heating assembly housing, remove the 4 screws that hold the element cover to the housing panel.

6. Disconnect wires from the ends of the elements noting their original locations.

! **NOTE:** Using a flat head screwdriver gently pry between the end of the connectors and the element to release the wires.

! **NOTE:** Some of the wires may have a “piggy-back” connector that allows a second wire to connect to the same prong as the first wire. Try and keep the “piggy-back” connection together when pulling the wires off the element.

7. Using a 3/8” ratchet or wrench remove the hex head screw from both sides of the element. Remove elements from the element housing and replace with the new elements.

8. Reassemble in the reverse order as above.

**CAUTION:** When re-installing covers and panels, be sure the wires are guided and tucked into the proper openings along the right side so they are not pinched and allows enough space to reinstall panel.

**HIGH TEMPERATURE CUTOUT REPLACEMENT**

**WARNING:** Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

**CAUTION:** If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

**Tools required:** Phillips head screwdriver

- Needle nosed pliers
- Wire Snips

**CAUTION:** Follow “Preparation for Service” instructions before proceeding.

1. Remove the 5 screws that secure the angled switch housing cover located just below the Remote Switchboard on the top right. Remove cover and set aside.

2. Loosen the front panel that spans across the top front facia. To do so, locate the 4 screws: 2 on the left and 2 right on the angled part behind the facia. This piece can be removed by turning it 90 degrees and allowing the glass mounting screw slide through the slot in the backside of the panel.

3. Remove the heating assembly cover in the top center by removing the 6 screws on the side brackets: 3 on the left and 3 on the right (at the front). Wires from the switch housing are connected through this piece, so carefully move it farther down in the body of the unit, to give some room to access the heating assembly housing.

4. Release the top panel of the heating assembly housing by removing 4 screws on the side brackets. Pull the top panel of the heating assembly housing out from between the brackets.

5. Locate the high temperature cutout and remove the mounting screw.

6. Disconnect the wiring connections noting their original locations.

! **NOTE:** Using a flat head screwdriver gently pry between the end of the connectors and the cutout to release
the wires.
7. Cut and remove plastic cable tie that hold the wires in place on the top of the panel.
8. Properly orient the new high temperature cutout and connect all of the wiring connections.
9. Reassemble in the reverse order as above.

BLOWER/FAN REPLACEMENT

**WARNING:** Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

**CAUTION:** If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

**Tools required:** Phillips head screwdriver.
Needle nosed pliers.

**CAUTION:** Follow “Preparation for Service” instructions before proceeding.

1. Remove the 5 screws that secure the angled switch housing cover located just below the Remote Switchboard on the top right. Remove cover and set aside.
2. Loosen the front panel that spans across the top front facia. To do so, locate the 4 screws: 2 on the left and 2 right on the angled part behind the facia. This piece can be removed by turning it 90 degrees and allowing the glass mounting screw slide through the slot in the backside of the panel.
3. Remove the heating assembly cover in the top center by removing the 6 screws on the side brackets: 3 on the left and 3 on the right (at the front). Wires from the switch housing are connected through this piece, so carefully move it farther down in the body of the unit, to give some room to access the heating assembly housing.
4. Release the top panel of the heating assembly housing by removing 4 screws on the side brackets. Pull the top panel of the heating assembly housing out from between the brackets.
5. From the top panel of the heating assembly housing, locate and remove the 6 screws that hold the blower/fan assembly to the housing panel. Separate the blower assembly from the housing panel.

**CAUTION:** When removing the blower assembly mounting screws support the assembly to prevent any damage to the unit.

6. Disconnect the wiring connections noting their original locations.

**NOTE:** Using a flat head screwdriver gently pry between the end of the connectors and the blower/fan to release the wires.
7. Properly orient the new blower/fan assembly and connect all of the wiring connections.
8. Reassemble in the reverse order as above.

POWER CORD REPLACEMENT

**WARNING:** Disconnect power before attempting any maintenance or cleaning to reduce the risk of electric shock or damage to persons.

**CAUTION:** If unit was operating prior to servicing allow at least 10 minutes for lights and heating elements to cool off to avoid accidental burning of skin.

**Tools required:** Phillips head screwdriver.
Needle nosed pliers.

**CAUTION:** Follow “Preparation for Service” instructions before proceeding.

**CAUTION:** Follow “Instructions from Removing from Wall” before proceeding.

1. Locate the power cord and remove the 3 screws that attach the metal bracket to the unit - one on the back of the unit and two on the bottom. (Figure 4)
2. From the front, remove the 2 Philips screws that fasten the front panel tabs, tilt the panel forward and lift off. (Figure 10)
3. Remove the 4 screws that fasten the acrylic media tray and the 2 screws that attach the media tray to the unit. The media tray cannot be removed but will now allow the ability to remove the electrical box.
4. Remove the Phillips screw to release the electrical box cover in the bottom, right corner of the fireplace (Figure 5).
5. Carefully slide the electrical box to the right to release the securing tabs, as wires are fed through the strain reliefs on the cover and are connected within.
6. Unscrew the two wire connectors inside the electrical box and separate the wires (Figure 6).
7. Pull the junction box and power cord out the front of the fireplace.
8. With a pair of needle nose pliers, open the strain relief bushing that holds the power cord in place on the junction box and remove the cord.
9. Feed the new power cord through the junction box and squeeze the new strain relief in place on the cord and junction box. Re-connect wires. –(Wide blade on the plug is the neutral side of the power cord).
10. Reassemble in the reverse order as above.
